

# Jämtkraft

**Jämtkraft produces, distributes and sells electric power and district heating to customers primarily in the municipal districts of Östersund, Krokoms and Åre. We also have electricity customers throughout Sweden.**

**Environmental enthusiasts since 1889**

Most of the electric power that we sell is generated in our own hydroelectric and wind power stations and in the cogeneration plant. We also offer broadband connection via fibre optic cable. Our vision is to be a driving force for regional development and success. Our mission is to supply high-quality energy and service at long-term low prices. We are now involved in a project, Green Highway, as part of the SÖT partnership (the municipalities of Sundsvall, Östersund and Trondheim). The aim is that there will be green charging stations all the way from Sundsvall to Trondheim. Jämtkraft is contributing charging posts and charging stations in our region, so that it will soon be possible to refuel using power from water or wind. At Jämtkraft, we believe in making small changes, combined with perseverance and a touch of the tenacity that is so characteristic of Jämtland. These are just a few aspects of our long term commitment to making the world a better place. Find out more at [www.jamtkraft.se](http://www.jamtkraft.se).
