

Sweden Green Tech Building

The Sweden Green Tech Building is a non-profit-making basis project, to promote and develop exports of Swedish green technology. The Sweden Green Tech Building offers a selection of green technologies that Swedish companies have designed and which are already in use.

The Sweden Green Tech Building is a 7-floor business centre that is currently undergoing remodelling. Sustainable building and energy methods have been used in the refit of the building, so visitors will have the chance to experience first-hand, how many of the products being promoted, are used in their actual environments. Everything from waste management to electricity and bio-energy, such as, wind power and solar energy.
