

# Absolicon Solar Concentrator AB

**Absolicon is realizing the dream of finding an inexpensive way to generate electricity and thermal heat from sunlight.** The solar collector X10 produces both electricity and thermal heat in the same module, thanks to the **Double Solar Technology™**. The simultaneous generation of electricity and heat makes our product one of a kind and a new era in solar energy has started!

The options for the usage of both the electricity and thermal energy that the X10 produces are vast - hot tap water, heating, heat-powered air conditioning, desalination or process heat.

Absolicon is a quickly growing company in Härnösand with a big market in Spain where solar is becoming a booming industry. In Sweden, the 60% grant for solar electricity has been made to include the Absolicon X10 with very favorable conditions.
