Fresh air with HEAT RECOVERY

Air Star produces a fresh indoor climate and a comfortable feeling that makes you and your home blossom! Air Star is a ventilation system with incremental heating that works excellent in combination with other heating sources. Compact ventilation units brings both supply air and exhaust air with heat recovery. The heat exchanger recovers, on average, 85% of the heat from the exhaust air, that helps saving energy and solve moist problems.

With Air Star room ventilator installed in the building you will be guaranteed good and economical ventilation. With Air Star ventilating unit you will also have enough circulation, right humidity and a good balance between supply air and exhaust air. Air Star has a new trendy design to fit modern homes and environments and is optional to different applications and colors.

Air Star – an invention for ventilation and heat made in Sweden!
