

Business Center Bornholm

Bornholm is striving to be a 100 % CO2 neutral and sustainable society, a Bright Green Island

We are already far in the area of renewable energies, and it is the task of **Business Center Bornholm** to tell the world about the **green solutions that we have and are developing in Bornholm**. We want to share our solutions and our know how and to exchange experiences and cooperate with others in our further work to create a bright and green future.

No other place in Europe can match the potential of Bornholm as a testing area for new renewable energy technologies. Being an island with only one electric cable to the outside world, Bornholm has perfect conditions for testing new technologies. This has attracted research projects on 2. generation bioethanol, electric cars, wind energy and more, and thus is an important factor in securing growth and development in Bornholm while trying to find solutions to overcome the climate changes we are facing.
