

# EcoCycle Design

**EcoCycleDesign**  
GREEN PLANNING AND BUILDING

**EcoCycle Design is a holistic way to design buildings and cities and it combines beautiful design with system design.** Our main working-fields are developing new ideas, analysis for decision-making, planning, design, project management and mentorship. We have improved the method for more than 40 years in different types of projects in Sweden and all over the world.

EcoCycle Design can be used both for new buildings and retrofitting of an old building. EcoCycle Design includes cost efficiency, sustainability, energy saving, recyclable material, high quality, good indoor environment and health. Let us show you why we need to plan our buildings in another way and how you can use EcoCycle Design as a tool.
