The Sundsvall snowcooling plant – large scale snowcooling

When The County Council of Västernorrland, Sweden, was looking for a new cooling system the choice fell on snow cooling. Snow cooling is provided by Snowpower AB, energy company based in Luleå, Sweden. Since the summer of 2000 the hospital in Sundsvall uses snow cooling, both for comfort and storage, with very good operational results. The snow cooling plant in Sundsvall is unique, and so far this is the only plant of its kind.
