

Moving Floor AB

Moving Floor Concept has been developed to improve animal welfare, working environment and negative environmental impact. The self-cleaning floor can be used for all kinds of livestock. The system provides a totally automatic cleaning that guarantees removal of the manure and slurry out of the stable within two hours. Moving Floor Concept guarantees a remarkable labour saving and 70% less straw consumption compared to straw bed system.

The frequency and intervals of the movement is regulated via computer. The frequent cleaning intervals create a better hygiene and improve animal welfare. It also contributes to an improved working environment. We have been developing the concept for 15 years now and manufacture self-cleaning floors with focus on good quality, efficiency and profitability – Welcome to our world!
