

Snowpower AB

Benefits for snow cooling:

- Electricity consumption is reduced 90-95%
- Snow cooling is relatively insensitive to increasing electricity prices
- Snow cooling provides “unlimited” cooling power
- Snow cooling may mean shorter snow transportations
- Snow cooling facilitates handling of polluted city snow

snowpower

Snowpower AB is a young energy company with much experience, based in Luleå, Sweden. We offer our knowledge and experience whether you want to buy cooling, want to build your own snow cooling plant or if you will let us build it for you. Together with our partners we have capacity to serve all existing cooling needs. Snow cooling is the solution for companies and organisations that care for both economy and environment.

There are also some general benefits for snowcooling and other district cooling systems – very high operational safety(>99%), easiness, improved energy surveillance, delivery also on the hottest day, areas are set free for other purposes, and next to no noise.

Welcome to a cooling alternative for a sustainable future!
