

Solljus AB

Ordinary lighting spending 35kW

Solljus spending 19 kW

Solljus AB supplies companies with highly efficient lighting fixtures ideal for industrial and storage warehouses, mines, arenas and building sites. Our lighting fixtures are called Solljus - which translates to Sunlight in English - because they provide light which resembles sunlight. They are flicker-free, provide sharp colour contrasts and allow colours to be seen as if in sunlight.

Solljus' fixture with high intensity discharge ceramic metal halideuses most often uses 30-90% less electricity than other lighting fixtures. The energy savings made possible by Solljus allow our clients actively reduce carbon dioxide emissions and save cash expenditures in emission rights costs to become climate neutral.
