

# Sustainable Business Mälardalen

Sustainable Business Mälardalen 

The Mälardalen region holds many innovative small and medium sized companies within several disciplines of clean technology, i.e. technology aiming either to replace conventional industrial or energy system or to protect and recover eco-systems.

At the same time, research is advancing rapidly within these technological areas. We stand in front of a new era, when engineering, chemistry and biology come together to explain the complexity of the threats to global nature and to develop the sustainable systems that are necessary for the future of economical and societal growth. The CLEAN project aims to identify latest advances within CLEAN technologies in the Mälardalen region and put them on the international market.
